Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Monica is interested in finding a treasure but the key to opening is to get the sum of the main diagonal elements and secondary diagonal elements.

Write a program to help Monica find the diagonal sum of a square 2D array.

Note: The main diagonal of the array consists of the elements traversing from the top-left corner to the bottom-right corner. The secondary diagonal includes elements from the top-right corner to the bottom-left corner.

Input Format

The first line of input consists of an integer N, representing the number of rows and columns.

The following N lines consist of N space-separated integers, representing the 2D array elements.

Output Format

The first line of output prints "Sum of the main diagonal: " followed by an integer, representing the sum of the main diagonal.

The second line prints "Sum of the secondary diagonal: " followed by an integer, representing the sum of the secondary diagonal.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 3

1 2 3

4 5 6

7 8 9

Output: Sum of the main diagonal: 15

Sum of the secondary diagonal: 15

Answer

```
import java.util.Scanner;
public class Main{
    public static void main(String[] args){
        Scanner pc=new Scanner(System.in);
        int n=pc.nextInt();
        int[][] arr = new int[n][n];
        for (int i = 0; i < n; i++) {
            for (int j = 0; j < n; j++) {
                arr[i][j] = pc.nextInt();
            }
        }
        int mainDiagonalSum = 0;
        int secondaryDiagonalSum = 0;
        for (int i = 0; i < n; i++) {
            mainDiagonalSum += arr[i][i];
            secondaryDiagonalSum += arr[i][n - i - 1];
        }
        System.out.println("Sum of the main diagonal:" + mainDiagonalSum);
```

```
        System.out.println("Sum of the secondary diagonal: "+  
        secondaryDiagonalSum);  
    }  
}
```

Status : Correct

Marks : 10/10
